

Southwire™

Congratulations!

Your vehicle is equipped with Southwire's Surge Guard* product 41261. This product keeps you and your vehicle safe from abnormal circumstances such as, voltage beyond normal operating ranges (high/low), an open neutral and/or open ground circuit, as well as reverse polarity connection. If your vehicle experiences any of these conditions, the Surge Guard* 41261 have you and your vehicle covered and will prevent these conditions accessing to your vehicle.

POTENTIAL FAILURE MODES

- If the LED is on, this indicates your vehicle is connected to either reverse polarity or an open ground
- If the LED is flashing, this indicates your vehicle is connected to abnormal (high/low) voltage

DEFINITIONS

Reverse Polarity: neutral and hot conductors are swapped

Open Ground: power is not grounded as a results could cause shock

Open Neutral: loss of grounded power carrying conductor (return voltage line)

Power Surge: a form of electrical disturbance, spike in power and voltage droop

Low or High Voltage: voltage that is outside of allowable tolerances (102VAC-132VAC) which may cause failure of electrical devices

Southwire™ Surge Guard "Protects What You Value The Most"*
