

# SERIES 100 EDGE SCREEN PROTECTOR

SnapNrack Solar Mounting Solutions

The SnapNrack line of solar mounting solutions is designed to reduce total installation costs. The system's technical innovations have been proven to drive down costs and improve installation quality on more than 350 MW of solar installations.

## Edge Screen Protector Simplified

SnapNrack Series 100 Edge Screen Protector is an innovative way to guard against critters and debris build up under new and existing solar arrays without damaging arrays or reducing production. The edge screen protector is an open wire frame that allows for air flow, ensuring modules remain cool. Installation is a tool-less process with each kit that includes 100 feet of screen, and 36 clips. The screen protector is composed of a galvanized steel 1 / 2" mesh and galvanized spring steel.

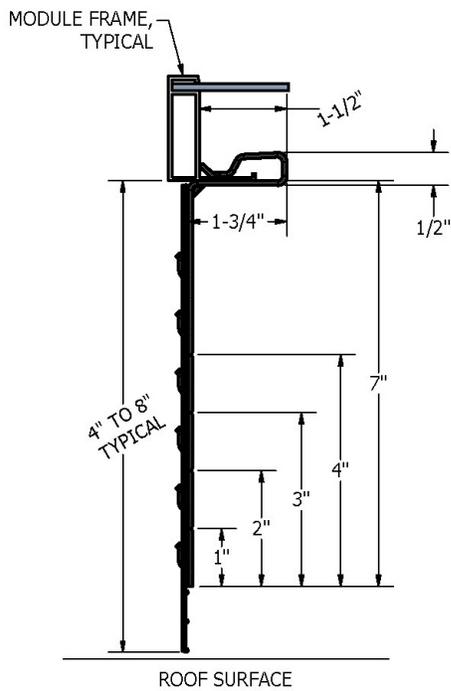

## Edge Screen in 4 Simple Steps:

- 1) Determine edge clip height
- 2) Snap the clip to the correct height
- 3) Attach clip to the module
- 4) Attach screen to clip

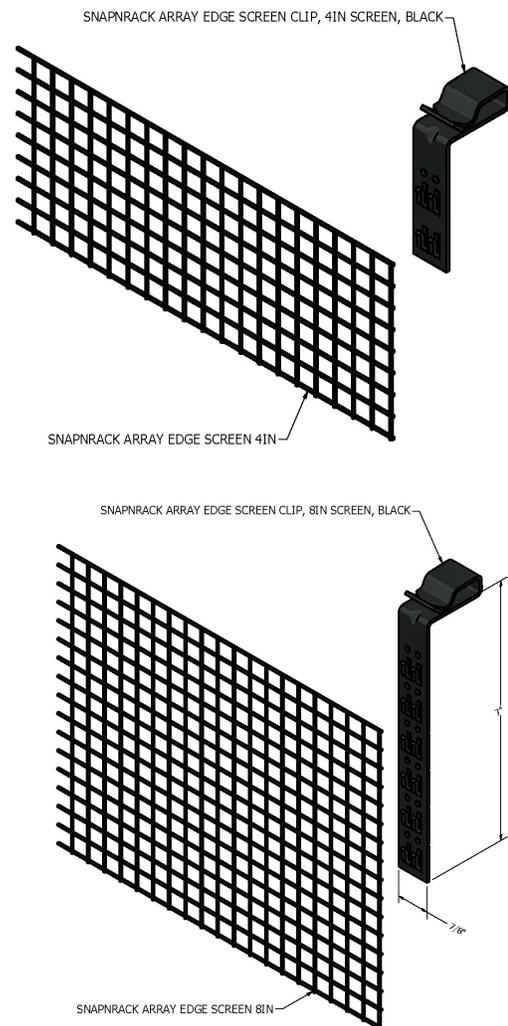

Place order with your distributor. Purchase material for a single project or order in bulk for additional savings

### Edge Screen Clip Dimensions

### Edge Screen Dimensions

Edge Screen Technical Data <small>Patent Pending</small>	
Screen Materials	• PV Coated Galvanized steel 1/2" mesh
Screen Color	• Black
Screen Weight	• 0.18 LBS/ Ft. @ 8" Wide
Clip Materials	• Painted and Galvanized spring steel
Clip Color	• Black
Clip Weight	• 0.16 LBS
