Note	1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uF & 47uF parallel capacitor. 3. Tolerance: includes setup time tolerance, line regulation and load regulation. 4. De-rating may apply in low input voltage. Please check the de-rating curve for more details. 5. In parallel connection only one unit will operate if the total output load is less than 5% of the rated power. 6. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives 7. This test is done without enclosure: I/P-O/P 4242VDC. If with enclosure: I/P-O/P 2121VDC,I/P-FG:2121VDC, O/P-FG: 707VDC

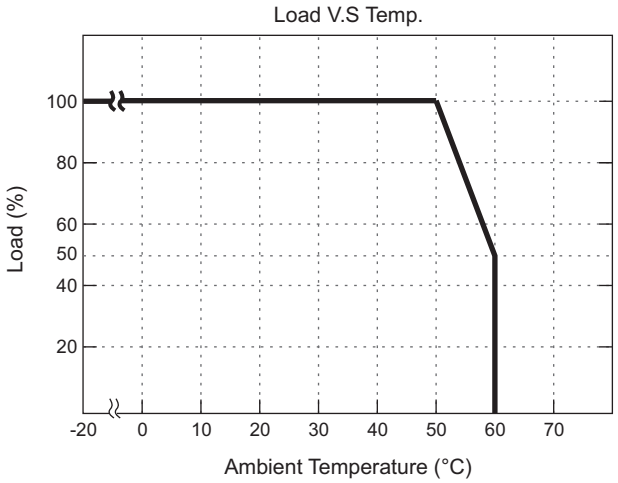
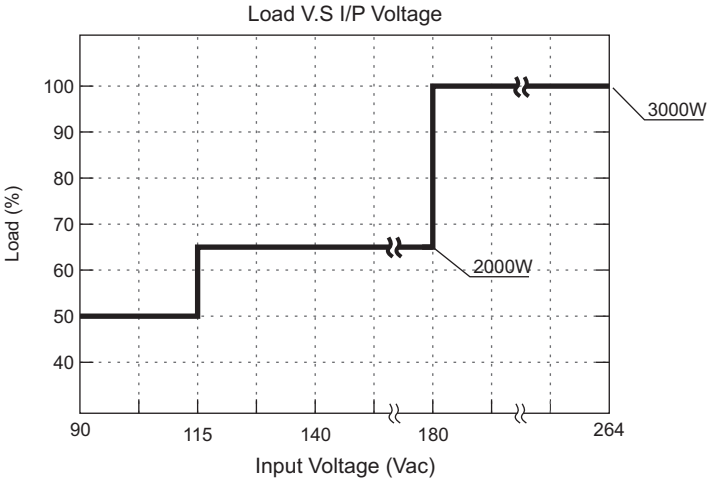
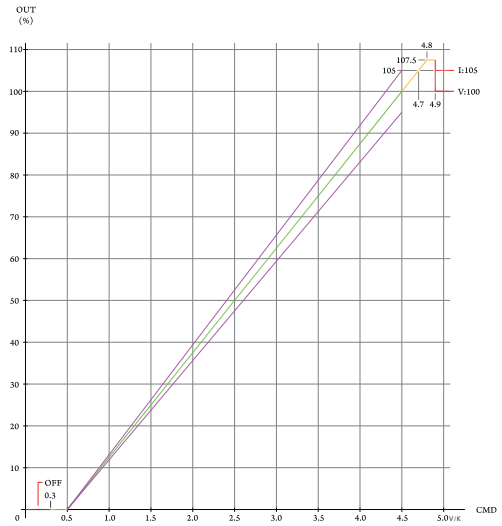
De-rating Curve:



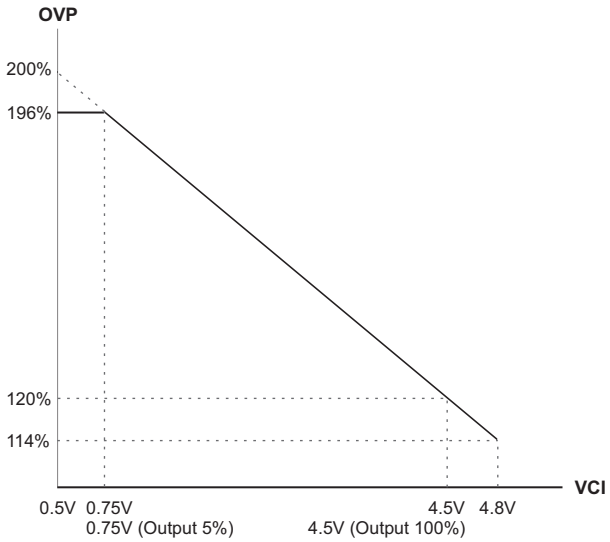


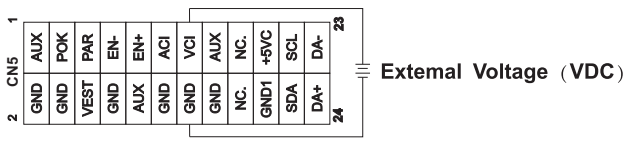
CMD VS Output Curve:

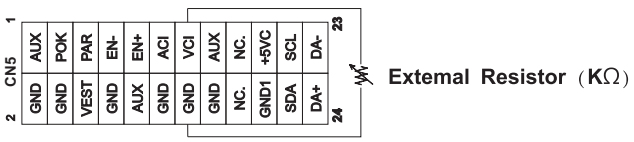


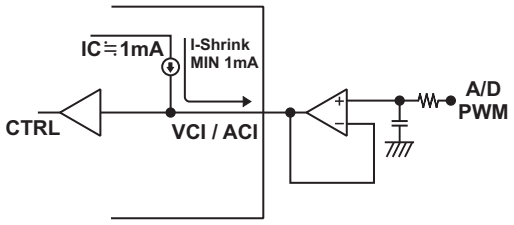
To ensure the power supply output voltage and current could be accurately adjusted, please make sure to adjust the output voltage and current > 10% vs. the rated voltage and current. (e.g. for a 300V unit, please adjust the DC output voltage above 30V to ensure accuracy; same applies to the output current)

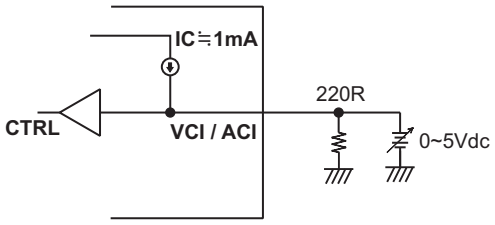
VCI VS OVP Curve:

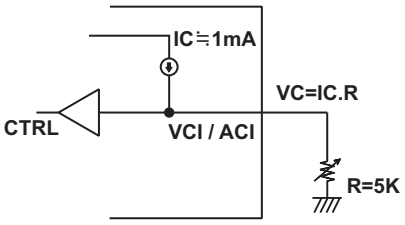






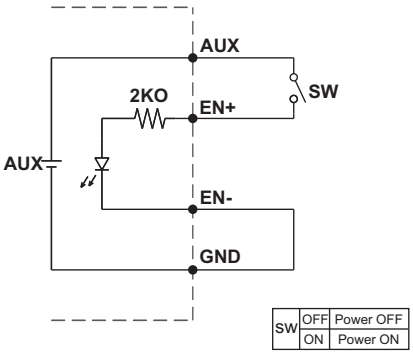






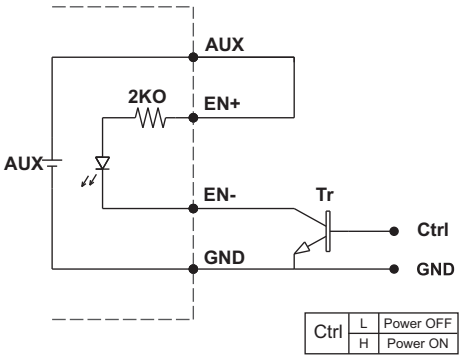
Remote ON/OFF:

(A) Default Setting



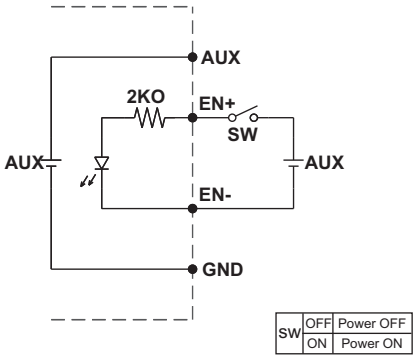
(A) Using internal 5V auxiliary source

(B)



(B) ON / OFF Control by NPN transistor

(C)



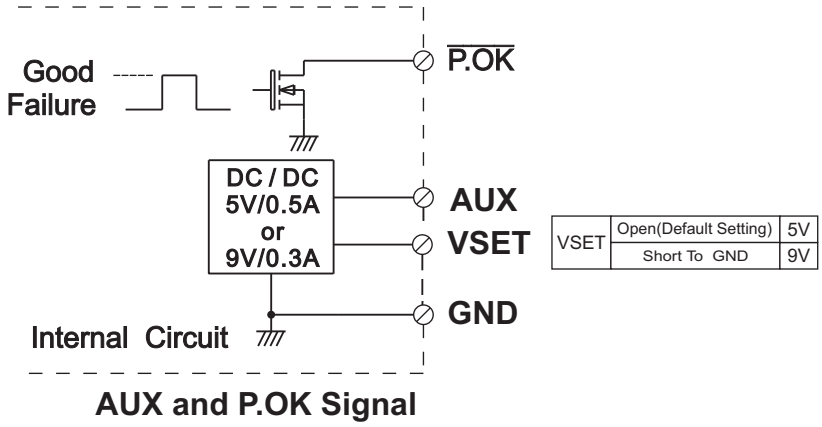
(C) Using external voltage source

GND shown in above diagram is referring to the GND of CN5, not the Grounding from main power(NEG-).

Power OK Signal & Auxiliary Power Setting:

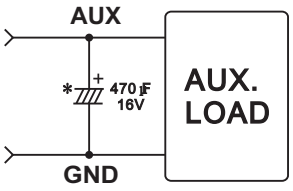
*The grounding of "AUX" power and P.OK signal should be connected to "GND" port. If " VO-" is connected as Grounding, make sure to short the GND and VO- ports.

Open drain signal low when PSU turns on, Max. P.OK sink current: 20mA, Max. drain voltage: 40V.



AUX and P.OK Signal

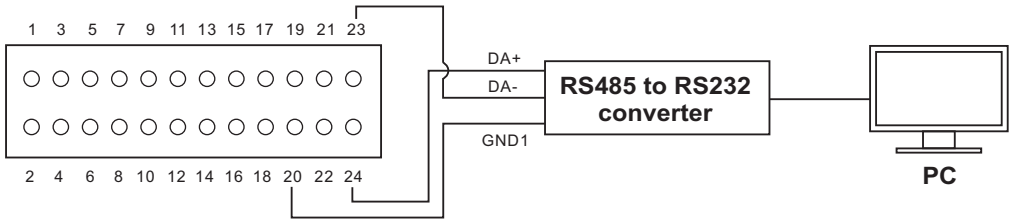
*Place an additional capacitor to have a better performance of auxiliary power operation.



Do NOT exceed 5V/0.5A or 9V/0.3A

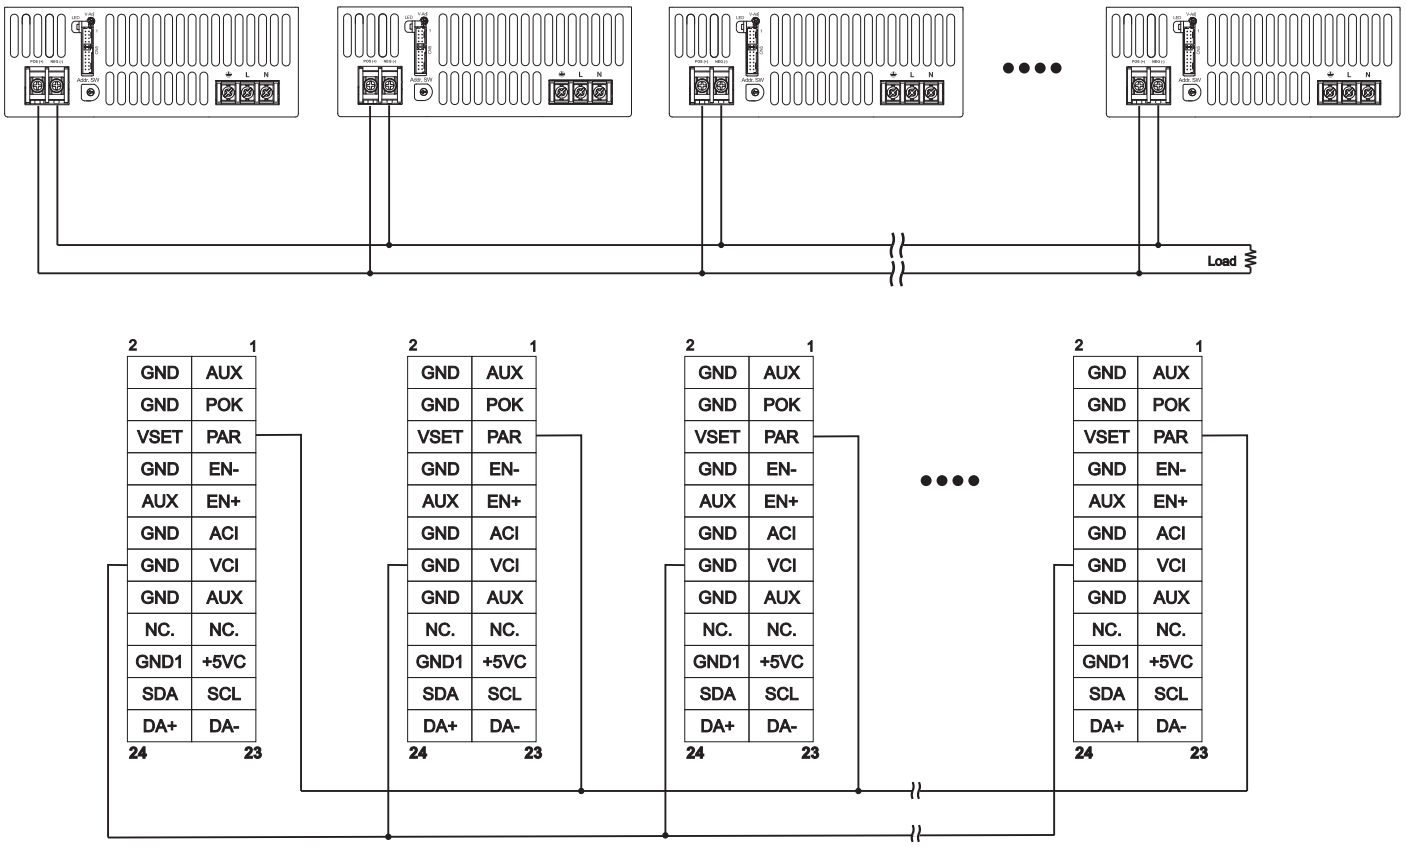
GND shown in above diagram is referring to the GND of CN5, not the Grounding from main power(NEG-).

RS485 communication connection diagram



Note: Make sure GND1 (pin 20) is connected to the external communication kit when using RS485 / I^2C

1. Current Sharing



Remarks:

1. AEK-3000-HV Oring diode has the built-in active current sharing function to support max. of 8pcs connected in parallel condition to support higher output power. When performing parallel connection, make sure to note the followings:
   a. Please connect PAR pins together for current sharing function
   b. Among the parallel connection units, output voltage difference of each PSU should be <0.2VDC (This can be set via V-adj from the PSU front panel VR)
   c. Total output current must not exceed 90% of the rated power in parallel condition
      Maximum output current at parallel condition = rated current per unit x number of unit x 0.9
   d. To ensure current share balance, output current of each unit must be >10% vs. the rated output current

2. For Series connection, please find some of the remarks as follow:
   a. Max. units for series connection is 2pcs
   b. Total output current must not exceed 90% of the rated power in series condition
      maximum output current at series condition = rated current per unit x 0.9
   c. Make sure to isolate all the signals from CN5, except I^2C/RS485, Pin 19, 20 and +5VC
