Wiring Guide

The illustrations below show how to properly wire lithium batteries. Batteries should be installed upright for mobile applications.

Battery Bank Terminal Connections

All battery interconnects, busbar and device connections to resist vibration by using nylon insert lock nuts, thread locking fluid, or lock washers (split lock or external tooth).

100Ah Lithium Battery Bank Parallel Connection

Note: Up to a maximum 4x 100Ah lithium batteries may be connected in parallel. Lithium batteries may not be connected in series. New batteries should never be connected to old batteries. All batteries should be charged to a minimum of 13V before connecting them together.
